Machine Learning / AI Scientist

Results-oriented AI Software Engineer and Team Lead with 6 years of hands-on experience developing, deploying, and scaling production-ready machine learning solutions. Proven expertise managing the end-to-end ML life cycle, from translating business needs into AI/ML applications to optimizing models on large-scale infrastructure. Specialized in computer vision, ML infrastructure, and data processing. Currently directing a 3-person ML team, mentoring engineers, and driving the delivery of high-impact, data-driven solutions in fast-paced environments.

WORK EXPERIENCE

Collaborationroom.AI

05/2024 - Present

ML Lead Developer

- Developed and deployed a CNN-based emotion detection model using PyTorch, achieving 76% accuracy and optimizing it for real-time performance on client-side hardware.
- Engineered and scaled an attention-based object detection system to identify restricted items with ~94% mAP, automating a critical compliance monitoring process.
- Built and implemented an agent focus detection model with 97% accuracy, directly contributing to improved agent productivity and business outcomes.
- Reduced ML deployment costs by 40% by orchestrating containerized models with Kubernetes and deploying them on Triton Inference Server, enabling efficient auto-scaling on AWS/Azure.
- Leading a team of 2 ML Engineers through the end-to-end project lifecycle, from technical design to deployment, fostering skill development and ensuring on-time project delivery.

Falcon Autotech

06/2020 - 04/2024

ML Engineer

- Trained and deployed advanced computer vision models (CNN, YOLO, U-Net) to build end-to-end systems to detect, classify, and segment common warehouse objects.
- Led the end-to-end development and deployment of automated systems for warehouse operations, including real-time error detection in parcel sorting and robotic parcel handling, which reduced operational errors by 20%.
- Optimized ML models for production deployment on edge devices (Nvidia Jetson) and low-power hardware, achieving a 3x inference speedup through quantization and conversion with TensorRT, ONNX, and OpenVINO.
- Mentored two Jr. ML engineers, providing guidance on best practices for the full model development lifecycle and fostering team growth.

Markatent

05/2019 - 08/2019

Junior Software Developer • Internship

Gurgaon, India

- **Engineered a RESTful API using Django** to facilitate automated facial comparison, serving as the core backend for the application.
- **Integrated Amazon Rekognition** into the application pipeline to execute high-accuracy biometric matching and facial analysis.
- **Architected cloud infrastructure on AWS**, utilizing **EC2** for scalable application hosting and **S3** for secure, durable storage of user image data.
- **Eliminated manual verification** by replacing traditional authentication/matching methods with an automated AWS-powered pipeline.

EDUCATION

Bachelor of Technology in Computer Science

Indraprastha Institute of Information Technology (IIIT), Delhi

Delhi, India • 06/2016 – 06/2020

Major in Applied Mathematics

CERTIFICATIONS

Convolutional Neural Networks

DeepLearning.AI

Data Science Ethics

University of Michigan

SKILLS

Programming Languages and Libraries: C#, Matplotlib, Numpy, OpenCV, Pandas, Python, SQL, TensorBoard

ML Specializations: Classic ML, Computer Vision, NLP

ML Frameworks: Keras, PyTorch, Scikit-learn, Tensorflow

ML Models & Algorithms: CNN, ResNet, RNN, RT-DETR, Transformers, U-Net, YOLO

MLOps: AWS, Azure ML, CI/CD, Docker, DVC, Git, Kubernetes, MLflow, Triton Inference Server

Model Optimization: Model quantization, ONNX, OpenVINO, TensorRT, TFLite
